

AKAAM SHAMERANY

London, UK | +44 7931 841239 | commitsnips@gmail.com | linkedin.com/in/akaam-shamerany | github.com/alpharaoh

PERSONAL STATEMENT

Solutions-focused Software Engineer with extensive experience in building complex, scalable applications. Specialises in full-stack development using React, TypeScript, and Node.js, with proven expertise in AI integration and performance optimisation. Track record of delivering high-impact technical solutions that drive business value.

WORK EXPERIENCE

Bland.ai

Building cutting-edge AI voice technology:

London, UK

Senior Software Engineer (React, Typescript, Redis, Postgres, NodeJS, Baseten, WebRTC, Prisma)

2025 – Present

- Built and shipped a fully interactive voice-enabled web widget, adding Web as a first-class channel alongside Telephony and SMS; architected end-to-end and delivered in one week, now a key competitive differentiator.
- Designed, self-hosted, and deployed real-time AI live translation for phone calls, enabling natural two-way conversations with split-second latency; engineered the streaming ASR → MT → TTS pipeline supporting 80+ languages.
- Created a deterministic testing framework for AI voice agents with CI gating, delivering reproducible results and enterprise-grade confidence for large deployments.
- Owned reliability of production voice pipelines (state management, streaming, retries, backpressure/rate-limiting, observability), improving correctness under load and reducing on-call noise.
- Contributed core infrastructure to the enterprise knowledge base used to ground agents in customer context, improving answer accuracy and task completion.
- Partnered directly with CEO/COO and Special Projects on high-priority customer rollouts, shipping at startup speed while maintaining production rigor.

11x

Engineered critical components of B2B lead generation and automation platform:

London, UK

Head of Engineering (React, Typescript, NextJS, Postgres, GraphQL, Prisma, Drizzle, AWS, LangGraph)

2023 – 2025

- Architected and developed LinkedIn automation system processing 10,000+ daily interactions with 99.9% reliability, implementing sophisticated retry mechanisms and rate limiting that became the company standard
- Engineered website visitor tracking system end-to-end in one week, enabling real-time lead identification and contributing to over \$1M in qualified pipeline generation
- Built and optimized CSV lead processing system which has safely processed 400,000+ records to date, reducing processing time by 60% through custom parsing algorithms
- Successfully onboarded and mentored 4 new engineers while maintaining team velocity, resulting in the fastest engineer ramp-up in company history
- Led critical database infrastructure migration to pgBouncer, reducing connection timeouts by 95% and eliminating customer-reported performance issues
- Implemented enterprise CRM integrations (Salesforce, Hubspot) with custom scheduling using AWS EventBridge, handling 20,000+ daily synchronizations
- Architected and developed Alice 2.0, a new AI-powered product which takes advantage of LangGraph to build agentic experiences. Created state-of-the-art message generation graphs that used DFS algorithms to traverse a sequence tree

Quantum Boost

Accelerated material science using Machine Learning algorithms

London, UK

Software Engineer (React, Typescript, Python, Postgres, PyTorch, GraphQL, Postgraphile, Urql, GCP)

2021 - 2023

- Developed custom Bayesian Optimisation algorithms with Gaussian Process implementation in NumPy
- Built complex probability visualization systems enabling chemists to understand underlying models

- Engineered chemical formulation constraints and XOR material exclusion logic
- Implemented GraphQL middleware with custom Postgres row-level security using Auth0
- Led product growth initiatives resulting in hundreds of community members and published research

Interfilm

Led development of high-performance international website

Remote

Freelancing Software Engineer (React, Typescript, NextJS, Sanity CRM, Vercel, Redux, Cloudflare) 2020 - Present

- Built high-performance website using Next.js with SSR and aggressive image caching strategies
- Implemented internationalization (i18n) for global market reach
- Engineered lead generation systems resulting in £15,000+ client acquisitions
- Engineered migration from traditional video hosting to Cloudflare Stream, reducing average video preview load times from 4-5 seconds to 50ms, dramatically improving user experience

PERSONAL PROJECTS AND VENTURES

Quadtree Image Compression (Python, OpenCV, Pillow, NumPy)

- Built recursive quadrant splitting with adaptive depth control and custom color averaging for optimal compression. This work was used by Danish researchers to do flood mapping for Denmark.

Exgen, LLM-native web framework (TypeScript, Node.js)

- A web framework that uses LLMs to dynamically generate HTML on the backend, integrating server-side logic with real-time UI rendering through a new declarative component syntax

Judge for Hult Prize

- I was invited to judge for the prestigious Hult Prize given my unique background, which is a global social entrepreneurship competition for students with a grand prize investment of \$1,000,000.

Lovable x Gronala hackathon, Project

- I was awarded the best design award from Nad Chiste of Lovable for the Lovable and Gronala hackathon, receiving a generous cash prize. My project was automating sales deck creation using AI using a knowledge base of brand tone and current company assets.

Among Us Bot, (Python, OCR, Pillow, OpenCV, Discord)

- Built the first working bot to auto-sync mute/unmute with Among Us round transitions using an OCR-based capture client + Discord voice controls. Currently has 108 stars on GitHub and hundreds of thousands of views on YouTube.

EDUCATION

THE UNIVERSITY OF BIRMINGHAM

Birmingham, UK

Masters of Computer Science

Grade: 1st Class Honours (>80%)

HIGHFIELDS SCHOOL

A levels: **A* (Physics), A* (Maths), A (Computer Science)**

GCSE: **A**, A* A* A* A* A*, A A A A A (Awarded best Maths and Science student)**
